EXPERIENCE

- Cognizant** On-Site
Moments CX-CRM | Programmer Analyst Trainee Nov 2025 – Present
 - Built a Salesforce travel management application during GenC training — **12 custom objects**, **5 role-based approval workflows**, **Bulk API + Batch Apex** migration layer, and **Gemini API** integration for location-aware recommendations
 - Delivered **Experience Cloud** portals with **SSO authentication**, **30+ LWC components**, and **Agentforce** case handling via Prompt Builder grounded on internal knowledge articles to automate policy guidance.
- Codebuddy Pvt. Ltd** Hybrid
AI/ML Intern May 2025 – Aug 2025
 - Engineered **two role-aware, multi-agent AI systems** serving **70+ employees** across hierarchical access tiers — covering HR policy resolution, leave management, skill-based staffing, and project tracking — recovering **7+ hours of HR bandwidth per week** by autonomously resolving **25+ routine policy queries** without human intervention.
 - Replaced **LLM-dependent pipelines** with classical ML algorithms across **two independent production workflows**, eliminating per-query third-party API costs entirely and reducing marginal inference cost to **\$0 per request** — directly shifting the company's R&D strategy toward **API-independent, cost-efficient ML approaches**.
 - Co-designed a **client-facing real-time property recommendation engine** alongside the CTO, incorporating **10 granular behavioral signals** (scroll depth, hover patterns, click behavior, session duration, and content engagement) with a **cold-start survey mechanism** for new users — delivered as a **formal client proposal** with a feedback-driven architecture designed to improve with data scale.
 - Conducted a **comprehensive cloud infrastructure cost analysis** evaluating **30+ instance configurations** for LLM inference workloads — modelling compute, storage, and long-term maintenance costs to produce an actionable **infrastructure decision framework** for deployment and client support planning.
 - Architected an **end-to-end multi-agent PRD generation platform** capable of transforming a **single line of input** into a fully structured, company-standard PRD — autonomously producing use cases, user stories, wireframe diagrams, and scoped requirements with **human-in-the-loop validation**; designed to shorten **sales proposal turnaround** and deliver **unambiguous build specifications** to development teams.
- Hi-Tech System & Services Ltd.** On-Site
R&D Intern Apr 2024 – Nov 2024
 - Developed and deployed a **computer-vision monitoring system** for molten-steel torpedo tracking at **SAIL IISCO**, achieving **>94% detection accuracy** in high-noise industrial environments.
 - Delivered **2 vision-based inspection pipelines** for electrical substations, enabling **automated fault detection** and reducing dependency on manual inspection frequency.
 - Built a **camera alignment and angle-correction tool** deployed across a **6 pan-tilt camera system**, improving frame alignment consistency for real-world industrial deployments.
- Google Developer Student Clubs (GDSC), RCC IIT** Part-Time
Instructional Facilitator May 2024 – Jun 2024
 - Delivered **hands-on GenAI workshops** on Vertex AI, Gemini API, and Python SDK, reaching **100+ students** across Google Study Jams; designed end-to-end demos with Streamlit, Docker, and GCP.

PROJECTS

- MedHive — Federated Learning Healthcare AI [GitHub]**: FL platform using Flower framework; custom DL models for cancer, glaucoma, and pneumonia detection. MLflow tracking, Docker + HF Spaces deployment. **2nd Runner-Up HackHazard'25**, 4th at Aignite'25.
- TrixBot — RAG AI Assistant [GitHub]**: RAG assistant (FastAPI, FAISS, LLaMA 3.3-70B via Groq) deployed on HF Spaces; served **over 1,000 users** during TechTrix 2025 with real-time event data and website ingestion.
- Stable Diffusion in PyTorch [GitHub]**: Implemented forward/reverse diffusion, noise scheduler, UNet architecture, and end-to-end inference pipeline from scratch; reproduced text-to-image generation with SD v1.5 pretrained weights.

TECHNICAL SKILLS

- Languages**: Python, Java, JavaScript (ES6+), Bash, SQL
- ML / DL / GenAI**: PyTorch, TensorFlow, scikit-learn, Computer Vision, Transfer Learning, Object Detection, Diffusion Models, RAG Pipelines, Embeddings, Vector Search
- Backend & MLOps**: FastAPI, Flask, REST APIs, Docker, MLflow, Git, GitHub Actions, Hugging Face Spaces
- Databases & Platforms**: PostgreSQL, MySQL, FAISS, Linux, Salesforce

EDUCATION

- RCC Institute of Information Technology** Kolkata, India
B.Tech in Information Technology — SGPA: 8.55 / 10 Aug 2021 – Jun 2025

ACHIEVEMENTS

- Global Rank 459**: TCS CodeVita Season 12 (Feb 2025)
- 2nd Runner-Up**: HackHazard 2025 (Hackathon)
- 4th Place**: Aignite 2025 (Hackathon)
- 1st Place**: Modelify, Innovation 2025
